

FOR IMMEDIATE RELEASE

**Frontline® Releases Bluetooth low energy Innovator™ Suite to Develop More Robust, Interoperable Devices for the Internet-of-Things**

Charlottesville, Virginia, USA – August 1<sup>st</sup>, 2015 – Frontline Test Equipment, Inc. announces the release of their [Bluetooth low energy Innovator Suite](#) product - a combination tool and services bundle positioned to help Bluetooth Smart developers create more robust, interoperable, and successful products for the internet of things in less time than ever thought possible.

The internet of things is expanding as more and more devices connect and work together. Bluetooth wireless technology, and especially Bluetooth Smart (Bluetooth low energy) technology plays a significant role in making this a reality. From sports and fitness to wearables, and from the connected home to the connected car, devices interoperate to make our worlds more enjoyable, productive, and safe. Demand for robust, reliable, and interoperable “connected” products has never be greater.

Frontline has for years been the leader in *Bluetooth* wireless technology testing tools, and the first to offer a Bluetooth low energy protocol analyzer. Now they have gone one step further – combining their industry leading [ComProbe BPA low energy Bluetooth Protocol Analyzer](#) with the power of their testing services group to offer the Bluetooth low energy Innovator Suite. Companies developing *Bluetooth* Smart enabled products can now have both the tool they need to efficiently debug and troubleshoot their implementation in the lab, but also testing services as part of the Innovator Suite. Companies simply send one of their devices to Frontline where it is tested against the latest Android and iOS devices in the marketplace, and then receive a report with test results, analysis, and recommendations.

“Time-to-market is everything” says Bill Johnson, Marketing Manager. “The first products to capture the attention of potential customers are generally the most successful products in the marketplace, assuming the quality is good. The *Bluetooth* low energy Innovator Suite will save our customer time and money in development, and reduce their overall time-to-market.”

“Developers of *Bluetooth* Smart devices need to know their devices are going to be interoperable and reliable – working the first time and every time” says Paul Russell, Vice President of Engineering Services. “Using the Innovator Suite gives our customers confidence that their products will work correctly, having been tested not only in their own labs but by Frontline as well. It is an extremely cost effective way to test products, especially for smaller or new-to-*Bluetooth* companies.”

**About Frontline**

Frontline is the world’s leading provider of [Bluetooth protocol analysis](#) test tools and packet sniffers. The ComProbe® family of analyzers spans a wide range of technologies – *Bluetooth* (Classic and low energy), 802.11 (Wi-Fi), NFC, USB, SD/SDIO, and High Speed UART (HSU). Frontline’s ComProbe line of *Bluetooth* analyzers are the industry standard and are used by hundreds of companies globally including CSR, Broadcom, Atheros, Apple, Nokia, Samsung, Sony, Toshiba, Panasonic, and Marvell. 84 out of the Fortune 100 companies use Frontline. Frontline’s technology has been integrated into the Bluetooth SIG’s Performance Tuning Suite (PTS) qualification tool which is the system used to determine if a product meets *Bluetooth* interoperability standards.

Frontline is the premier [Bluetooth device testing](#) (interoperability, robustness, etc.) and [Bluetooth services](#) house, maintaining the world's largest *Bluetooth* device library for use in its testing service organization. Companies developing devices can augment their engineering and quality assurance departments using Frontline testing service – from technology consultation, to device interoperability testing, to full turnkey product testing and management, Frontline offers testing services that help strengthen our customer's brands and help them to find, troubleshoot, and resolve device issues fast.
